11. Layla is investigating how much people would be prepared to pay for a bottle of water at an Eisteddfod.

Amount of money (£x)	Number of people
$0 \leq x < 1$	12
$1 \leq x < 2$	44
$2 \leq x < 3$	20
$3 \leq x < 4$	4

She asked a number of people at a concert on Monday how much they would be prepared to pay.

Monday's results are summarised in the table.

- (a) Calculate an estimate for the mean amount of money that a person would be prepared to pay for a bottle of water. [4]

- (b) Monday was a cool day.
 On Tuesday, it was much warmer.
 Layla asked a further 60 people the same question as she did on Monday.
 On Tuesday the mean was £2.30.

Use the data collected over the two days to calculate an estimate for the mean amount of money that a person would be prepared to pay for a bottle of water.

Give your answer correct to the nearest penny. [3]

Tomos disagrees with Jane.

Using multipliers, show that Jane is incorrect. [4]

- (b) Write down and simplify two formulae, in terms of P , to calculate the reduced prices of sandwiches at 3 p.m. and at 4:30 p.m.

Let

- P be the full price of the sandwich.
- T be the price of a sandwich at 3p.m.
- R be the price of a sandwich after 4:30p.m. [3]

15. *NwyCymru* gas company uses the following formula to calculate how much to charge its customers:

$$\text{charge (in pence)} = (\mathbf{U} \times 11.546 + \mathbf{D} \times 31.48) \times 1.05$$

The number of units of gas used by a customer is **U** and the number of days in the billing period is **D**.

A customer was charged £165.53 over a billing period of 90 days.
